

**AUGUST 2021: END SEMESTER ASSESSMENT (ESA) B TECH IV SEMESTER****UE19EC254 – DIGITAL COMMUNICATION**

Time: 3 Hrs	Answer All Questions	Max Marks: 100
-------------	----------------------	----------------

1	a)	Let $s(t) = 5 \cos(450\pi t) + 20 \cos(550\pi t) + 5 \cos(650\pi t)$. Find the following: f_c, f_m, A_c, μ, P_T and η . Also, draw the power spectrum.	7
	b)	With the help of a neat block diagram, explain the procedure to get in-phase component $g_I(t)$ and phase quadrature component $g_Q(t)$ from a given signal $g(t)$.	6
	c)	Consider $s(t) = 10 \cos[10^8 \pi t + 8 \sin(2000\pi t)]$. Assuming FM, find (i) Bandwidth, (ii) BW when A_m is doubled, (iii) BW when f_m is doubled, and (iv) BW when both A_m and f_m are doubled.	7
2	a)	For the message signals given below, find determine the Nyquist rate and the Nyquist interval (i) $g(t) = 3 \cos(50\pi t) + 10 \sin(300\pi t) + 1.5 \cos(120\pi t)$, (ii) $g(t) = 8 \sin(600\pi t) \cos(200\pi t)$, and (iii) $g(t) = \text{sinc}(100\pi t)$.	6
	b)	Explain the following (i) natural sampling (ii) flat-top sampling.	6
	c)	With the help of a neat diagram, explain the working principle of TDM.	8
3	a)	Let X be a uniform random variable over the range -5 to 5 . If it is required that $\sigma_Q^2 < 0.2$. What is the minimum N required? Assume midrise quantizer.	6
	b)	Derive the power spectrum of bipolar NRZ signal.	6
	c)	Represent 101111001 with (i) Unipolar RZ, (ii) Polar RZ, 3) Bipolar RZ, and 4) Manchester coding.	8
4	a)	Write the equation for a raised cosine pulse with roll off factor (case V). What are the expressions for its roll off factor and bandwidth?	6
	b)	Using the Gram-Schmidt procedure, find a set of orthonormal signals and express the given signals in terms of the calculated orthonormal signals. Let $T = 1$. 	8
	c)	Explain how to obtain the eye pattern on the oscilloscope. Explain the different information that could be obtained from eye diagram.	6
5	a)	A digital modulation system uses a sinusoidal carrier with amplitude $A = 0.5 \mu V$. Bit rate is $R_b = 10^6$ bps. Power spectrum of AWGN is $S_W(f) = 2 \times 10^{-20}$ watts/Hz. Find the probability of error for (i) BPSK, (ii) BFSK, (iii) ASK, (iv) QPSK and (v) DPSK.	10
