## OCTOBER 2020: IN SEMESTER ASSESSMENT B Tech FIFTH SEMESTER TEST - 1

## UE18CS312 (4 credit subject) - Data Analytics

	Time: 2 Hrs Answer All Questions Max Marks						Marks: 60				
1.	a)	An online certification course has been offered to students in the fifth and seventh semesters of CSE. The number of registrations and number of successful certifications across the country at the end of each month as recorded by the course is provided below:    Month								4 (2+2)	
		Number of registrations	44	101	386	4,904	12,106	74,696	1,02,458	12,524	
		Successful certifications	6	59	174	359	18,036	72,599	96,239	6,980	
		(ii) A potentia certificatio Assuming	how wo I regist ns betw the de	ould we rant war veen the stailed d	represer nts to ar e fifth and ata for f	nt the data iswer the d seventh fifth and	a provided in question: " semester :	n the table Is the incr students s mesters is	?	number of ignificant?"	
	b)	<ul> <li>In the data shown in Question 1(a) above,</li> <li>(i) Is there any anomaly? Substantiate your answer with a reason.</li> <li>(ii) The organizers of the course have realized that data has not been recorded during weekends in the month of April. Suggest a method to fill in the missing values.</li> </ul>									3
	c)	The range of scores of students for various components of their project submission is (3,8). If the marks scored are rescaled to a new range, (16, 25), what will a score of 7 in the (3,8) scale map to in the new range?									3
2.	a)	Briefly explain the sampling technique(s) used in each of the following cases:  (i) A Kitkat factory produces ten different flavours of the chocolates and has twenty assembly lines (two for each flavour). A taste tester selects a random chocolate bar from every other line.  (ii) A restaurant has placed a feedback card on every table and allows diners to choose whether they would like to provide a feedback on behalf of their group or not.								4 (2+2)	
	b)	For the following examples, identify the datatypes as numeric/ categorical, ordinal/ interval/ ratio and discrete/ continuous (as applicable)							3		
		(i) Movie rati (ii) When boo requir (iii) Temperat	oking a ed for t	i flight ti he pass	icket, re: enger (y	es/ no)					
	c)	Twenty engineers following six featu Hearing (v) Sens Briefly outline the	res: (i) ory mo	Intellige otor cod	ence (ii) Irdinatio	Conforn on and (v	nance to pr i) Persever	ocedure ( ance,	(iii) Eyesigh	nt (iv)	3 (2+1)

				uplify of fo	od at a restaurai	nt on six days in the	4 (2+1	
a)		n and Mani nave	rated the q	uanty of 10	ou at a reoldura.		+1)	
	week as follows:							
	Day	M Tu W	Th F	Sa				
	Rating(Aman)	4 2 3	5 1	3				
	Rating(Mani)	3 3 2	5 2	2				
İ								
	Given: mean and	standard deviatio	n of ratings:	µ <sub>Aman</sub> ≔ 3,	o <sub>Aman</sub> = 1.291, µո	<sub>fani</sub> = 2.833,		
	σ <sub>Mani</sub> = 1.067, corr	elation coefficient	t(Aman, Mai	ni) = 0.725	8			
						u u u u u u u u dan		
Ì	(i) What are	$\beta_0$ and $\beta_1$ if we m	ust predict A	\man's rati	ing in terms of M	ani's rating using the		
	simpl	e linear regressio	n with the fo	lowing mo	odel?			
				- 41 -42	# !\			
		Rating(Ama	$an) = \beta_0 + \beta_1$	· Rating(I	nani)			
	and the second s							
	(ii) What is the coefficient of determination for this model?							
	(iii) What is the coefficient of determination for the food on Thursday has on the model? (Suggest the test or statistic that can be used for this.)							
	the <b>n</b>	iodeir (Suggest i	He lest of st	ausuc mac	out by area.	•		
	The excelotion b	otwoon two vari	ables (#view	s for a vio	leo and average	#videos posted per	3	
b)	The correlation of	o charing platfor	m is found t	o be posit	ively correlated.	Answer the following		
	month) on a vide	riefly) substantiate	e vour answ	er:	•			
	questions and (briefly) substantiate your answer:							
	(i) Is it necessarily true that the Pearson's correlation coefficient between #postings/							
	month and #views on a video would to be closer to 1 that it is to 0 for this data.							
	(ii) Can we assume there is no cause-effect relationship between #postings per month and #views on a channel because correlation does not imply causation?							
ļ	and	#views on a chan	nel because	correlatio	n does not imply	causation?		
					dete le quitable f	or linear regression	3	
c)	For each of the f	ollowing scatterpl	ots, state w	netner the	gata is suitable i	or linear regression		
	$y = \beta_0 + \beta_1 \cdot x$ and, if it is not, what transformation(s) may be applied to the variable(s) make this data							
	and, if it is not, what transformation(s) may be applied to the variable(s) may							
	amenable for modeling with linear regression.

4.	b)	Rajesh has designed a visible in the night sky ba	ression classifier to predict the likelihood of stars being 3 (1+2) humidity reported on any day:							
		logit (p) = $log(p/(1-p)) = \beta_0 + \beta_1*humidity$ , where p is the probability stars are visible at nig								
		Given that $\beta_0 = 1.8185$ and $\beta_1 = -0.0665$ , answer the following questions:  (i) What does the value of $\beta_0$ mean?								
		(ii) If humidity on a day = 25, what is the probability with which stars are visible in the night sky according to this model?								
	c)	All the 100 precious sto stones' by a logistic req classifier, clearly labeling	ollected on a river bed, 100 happen to be precious stones.  with 100 other rocks have been classified as 'precious odel. Write the entries of the confusion matrix for this and columns. What further steps should be taken to plot (RoC) for this logistic regression model?							
_		LACID a pohomotic skate	tescribe the key characteristics of the level, trend and 4 (3+1)							
5.	a)	seasonality components of an additive time series data. What are cyclic components and, why								
		are they usually not accounted for in models for time series data?								
	b)	smoothing (SES) with alpha = 0.7 with the forecast accuracy of the simple moving average (SMA) with a window size = 3 for time points t=5,6,7. [You can use the values of y that are available to make the forecasts for SMA and for SES assume the forecast, F <sub>4</sub> =y <sub>4</sub> .]								
		T	2 3 4 5 6 7							
		Уt	11 12 16 17 19 20							
	c)	Suggest an application for	he following techniques to model time series data 3							
		(i) Croston's method (ii) Holt-Winter's method (iii) ARIMA								
6	a)		the two models given below (explain the symbols clearly): 4 (2+2)							
6	a)	Write the equation correct (i) ARIMA(0,1,0) (ii) ARIMA(1,0,1)	the two models given below (explain the symbols clearly): 4 (2+2)							
6	a) b)	(i) ARIMA(0,1,0)								
6		(i) ARIMA(0,1,0) (ii) ARIMA(1,0,1)	B Better: Model A or Model B? Why?							
6		(i) ARIMA(0,1,0) (ii) ARIMA(1,0,1)  Which model is better an Statistic Model A  1 AIC 258.24	6 (3*2)							
6		(i) ARIMA(0,1,0) (ii) ARIMA(1,0,1)  Which model is better an Statistic Model A	B Better: Model A or Model B? Why?
